How To Grow Hydroponic Marijuana At Home: A Complete Guide To Growing Most Potent Cannabis Ever!

Synopsis

I have been obsessed with hydroponic cannabis plants since I first came across them seven years ago. I immediately knew this is the king of all cannabis by far. Since then I have tried and tested various ways to grow them. Not each try ended in success, but when I did succeed, I realized how easy it is to grow them if only one knows the tricks and tips. Here in this book I share my proven methods for you to try. Hydroponics is the term which means "water working". The practice of growing marijuana with hydroponics is just like the growing of plants in highly oxygenated water or in nutrient enriched liquid. There are many types of hydroponic approaches that are suitable for indoor growing of marijuana. Hydroponics has the ability to grow crops much higher than the traditional yields, particularly in those areas where the soil cannot support crops. The growth rate of marijuana becomes double when the hydroponics method is used. The plants will grow much healthier and faster in the hydroponic system as compared to the traditional soil-based method. This book comprises the detailed explanation of the steps, tools, and setups required for growing hydroponic cannabis. The book is divided into seven sections; each section contains detailed information about the hydroponics process.

Customer Reviews

Good overview of hydro growing but not to much detail. Well written and helpful if you have never seen a hydro setup before, but just an intro book not a actual book to grow by.

I read it in an hour. It was informative but more like an outline versus a detailed guide that gets specific. The illustrations are very poor quality like it was photocopied. The title claims to be a complete guide to growing the most potent cannabis.... I disagree. It's a very quick overview of the different styles of hydroponics. For the price I wouldn't suggest buying it. I could get more info from googling for free. It's worth \$5. Not \$14. There are way better books for under \$10

I had the opportunity to try hydroponic last year. It was amazing! Seeing this book it reminded me of that wonderful experience so I took a chance and bought it. I found the book to be clear, precise and easy to understand. One surprising element was when I found out a friend already bought this very book and tried one of the growing methods and saw success. Overall a very good guide for anyone interested in growing their own good stuff.

thanks

The book or is it treatise "How to grow Hydroponic Marijuana at Home" by Jason Sabatini is an exposition on Hydroponic Marijuana, X-raying Hydroponic Marijuana, how hydroponics factor in the growth of Marijuana, Potency of Hydroponic Marijuana as opposed to other Marijuana, benefits of growing marijuana Hydroponically, Hydroponic growth methods, Preparation, Harvest time, Curing Process and Storage Process. In the book, Jason takes us through the process of the Growth of Marijuana Hydroponically, examining the processes involved in the growth, preparation, harvest and storage in an avant-garde way, almost like you are living through a lecture as He vividly expounds on the processes, breathing life to it, and giving it a live like feel. This He achieves through a unique perspective and imagery. In conclusion, the book is a must read for anybody involved in the growth of Marijuana, or remotely curious in its growth, as the author paints a pretty detailed picture. Review by Chiscogreg.

Book is poorly written. He tries to use big words to explain things and it sounds ridiculous. It sounds as if he was high when he wrote the book. Information is extremely vague and not a guide to growing hydroponic marijuana. Book was not proof read or spell checked before being published. Overall a waste of time and money to read 76 pages.

I usually never write product reviews but this book was so bad and lacked the needed info that I had

to write one. Simply put, don't waste your time or money on this book. Very general and really no substance for growing hydroponically. Instead of giving specific info that really helps you understand growing this way in a step by step manner, the author gives you web site urls so you can learn yourself what he should have put in the book. Look elsewhere if you want to learn to grow weed hydroponically.
