Synopsis

An indispensable tool for all science fiction writers, Space Travel explains the science you need to help you make your fiction plausible. You'll engineer your rockets with accurate technical data. Show your characters' physical responses to weightlessness. Know the environment of space, how inhospitable it is and how it's opening for business. Build an Earth-orbiting habitat for your story's setting. Discover our solar system... and the staggering immensity of interstellar space. Consider the prospect of near-lightspeed travel. Imagine the conflicts, legal and military, your fictional missions might spark. In this book, you'll see what is real today and what may become real tomorrow. Dr. Ben Bova is the six-time Hugo Award for Best Editor winner, former editor of Analog, and past President of SFWA.

Customer Reviews

Outdated in some areas. Still a great resource.

The style of how the book is written is great, but it WOEFULLY out of date. It has been ~16 years since original publication, so it is definitely high time for Dr. Bova and perhaps a credentialed physicist to tune this book up a little bit. As it stands, I'm not sure how much use it has for modern sci-fi writer and I don't think it is worth \$10.00. I sincerely hope they work on an update for this book or stop selling it.
