Grade 2 Subtraction (Kumon Math Workbooks)

Synopsis

Most grade-school workbooks try to cover the full range of topics in one workbook, and as a result do not dedicate enough pages to important mathematical concepts. Kumon's research has found, however, that children find learning easier when they tackle one skill set at a time. With these findings in mind, we designed our newest line of workbooks to help children with one particular mathematical skill set per book.

Best learning system!!!! compared few different books, but i think kumon is the best !!!My kid is kindergartener, but already finished 2 nd grade math and doing multiplication.Book is well made, so far she had never complained.We will keep using kumon books.

We started out using Grade 2 material as the actual Kumon program measures and takes a similar approach. It ensures the child has full mastery of the basics. Our son motored through this quickly though given it is self paced. In the course of a year he has moved from Grade 2 to Grade 5. It is a great way to enhance your child's learning.

good for children who have an innate drive.

It is a great workbook for my 7 year old son.

Love Kumon workbooks - my 6 year old just finished first grade and decided to keep his math fresh as well as prep him for the next grade. He does them well, 2 pages a day. The work progresses just right for him.

at the beginning was boring for my daughter because have so much pages just for subtractions but after that she love it and been improve a lot on her math

This book is wonderful. Like all Kumon books, it took my son from subtracting single digits to triple digits (that's where we are now) I see that there is more. If you want a book that helps your child learn the concepts of subtraction, this is not it. If you want a book that will help your child practice and perfect his/her skills, then this is it. You will still need to supervise and guide.

i bought it for my son who needed some additional work on subtraction and addition..we do 2 pages every night besides the regular home work..of course at first he didn't want to do anything but then got used to it and better.. AND the best thing: just before christmas he came home from school with a certificate saying "MOST IMPROVED IN MATH"!!! i can only say its because of this!!! we are a little ahead of the other kids now as he came home one day and said "mummy we just started the 3 digit subtraction in school - but i already know how this works because of the books!".. and so we were ahead almost 6 weeks from the other kids..i will buy more in the future, they are great workbooks and the kids will love them!!
