## Synopsis

The authors of *RealTime Physics Active Learning Laboratories, Module 1: Mechanics*, 3rd Edition - David Sokoloff, Priscilla Laws, and Ron Thornton - have been pioneers in the revolution of the physics industry. In this edition, they provide a set of labs that utilize modern lab technology to provide hands-on information, as well as an empirical look at several new key concepts. They focus on the teaching/learning issues in the lecture portion of the course, as well as logistical lab issues such as space, class size, staffing, and equipment maintenance. Issues similar to those in the lecture have to do with preparation and willingness to study.

## Customer Reviews

It's a pretty generic lab book. The labs are long, tedious, and repetitive. Needed it for a class.

I go to UNCC and took phys 1101. This book is an older version of the current manual (\$30 at Barnes and Noble). But IT DOES WORK. Some of the page numbers are different, but they're easily found! Sooo worth the deal.

What can I say about a lab book, lots of specialized equipment needed so not for use outside of the school lab environment.

I purchased this book because it was required for a course, General Physics I. It has what seem to be your standard physics laboratory activities. Learning this way was much more useful than reading a textbook or listening to lectures, but the activities did not stand out as particularly new,

different, or better than any other lab manual.

The book is missing the homework pages I need.

Great, Thanks

Exactly the workbook I needed for the class.

Good condition book
