# Medicine And Surgery Of South American Camelids: Llama, Alpaca, Vicuna, Guanaco

## Synopsis

The finest of the few books on medical care of South American camelids-and the only comprehensive account of the subject-this volume appears here in a new edition expanded to include new topics and some reference to Old World camels, along with llamas, alpacas, vicunas, and guanacos. Here, in updated and augmented form, is the premier text on South American camelids, covering biology, nutrition, management, care and handling, diseases, neonatal care and development, toxicology, congenital and hereditary conditions, and pertinent information about various body systems. It also contains basic information about anatomy and physiology and relates that information to more complex systems and clinical procedures. Revised by the original author, a recognised expert in the field, this edition includes additional material on nutrition and forage grasses. As South American camelids become ever more common in zoos, farms, and fields, and the problems of their health and maintenance become ever more pressing, this book will prove an essential tool for veterinary and zoo practitioners and researchers. Owners and breeders may also find it useful.

## Customer Reviews

Praise for the First Edition "A historically significant, worthy contribution to the veterinary literature. Any clinician who anticipates practice with South American camelids would benefit from having this book in his or her library." -- Charles J. Sedgwick, Journal of the American Veterinary

Medicine Association    â œNot just for llama veterinarians but also for the practitioner and zoo veterinarian, the book offers valuable advice as to the treatment of these unique animals and will be indispensable for anyone involved in South American camelid medicine.â • â “ A Rubel Zurich, Switzerland, Journal of Veterinary Medicine, Series A    â œFor veterinarians in English-speaking countries these camelids have posed a major problem, as the limited literature on these animals has been largely published in Spanish. â | Murray Fowler has bridged this gap magnificently â “ T. J. Bergin, Australian Veterinary Journal    â œTruly a labor of love. There is no comparable book available today.â • â “ LaRue W. Johnson, DVM, PhD, College of Veterinary Medicine and Biomedical Sciences, Colorado State University

- 2300 references to world literature

A "Must Have" BEFORE you get a Llama.Prevention is KEY when caring for animals and this book has what you need to know,what to look for and what to do when something happens to your Llama.

Although the book can be a difficult read for the layman, it is THE book for medical information on llamas. Dr. Fowler has been in the forefront of the llama industry since its inception in this country. This is a must have for your veterinarian if you have a llama of any kind. The only new best thing will be his new edition due to be out soon. (Lama is the genus, such as alpaca, vicuna, llama is the particular animal)

I am a relatively new alpaca breeder with lots of questions. This book answers many of my more detailed questions and gives good resource references that are current. The appropriate health care

of alpacas has a lot of controversy, but this book is objective in presenting the data. The reading is easy and once I started reading a topic I had to finish the chapter. I believe that everyone in the alpaca business should have a chance to review this book and use it as needed.

The second edition of this publication has: > Two new chapters: Conformation and Gaits, and > Disaster and Emergency Management. > A new chapter on reproduction, co-authored with Dr. P. Walter Bravo > Additional information on nutrition and forage grasses. > More comparative data on Old World camels. The incorporation of research conducted over the past 10 years. > More than 750 illustrations and tables > 2300 references to world literature

This book is a very thorough, comprehensive resource to South American Camelids. The book reads nice. Besides being applicable to llama-medicine, many extrapolations can be made to non-domestic hoofstock and wildlife.
